Day 3 — Object-Oriented Programming (OOP)

Topics

- Classes and objects
- Constructors using __init__()
- Encapsulation
- Inheritance
- Polymorphism
- Abstraction
- Access conventions
- Methods and method overriding

Tasks

- Create Student and Employee classes.
- Add properties and methods.
- Demonstrate constructors, inheritance, and encapsulation.
- Build a simple **Student Management Console Application** using OOP concepts.

Expected Output

- Python OOP practice programs.
- Console-based Student Management Application.
