Day 7 — CSS Fundamentals

Important Questions & Answers • Simple English for Internship Practice

Part 1: Theory Questions

1. What is CSS?

Answer: CSS stands for Cascading Style Sheets. It is used to style and design HTML web pages.

2. What are the three types of CSS?

Answer: The three types are Inline CSS, Internal CSS, and External CSS.

3. What is Inline CSS?

Answer: Inline CSS applies styles directly to an HTML element using the style attribute.

4. What is Internal CSS?

Answer: Internal CSS is written inside a <style> tag in the <head> section of an HTML document.

5. What is External CSS?

Answer: External CSS is written in a separate .css file and connected to HTML using a <link> tag.

6. What is a CSS selector?

Answer: A selector selects the HTML element or elements that you want to style.

7. Name common CSS selectors.

Answer: Element selector, class selector, ID selector, universal selector, and group selector.

8. What is a CSS property?

Answer: A CSS property defines which aspect of an element to style, such as color, font-size, margin, or padding.

9. What is the difference between margin and padding?

Answer: Margin is the space outside an element's border. Padding is the space between the content and the border.

10. What is the CSS Box Model?

Answer: The Box Model describes an element as content, padding, border, and margin.

11. What is Flexbox?

Answer: Flexbox is a CSS layout model used to arrange items in a row or column and align them.

12. What is responsive web design?

Answer: Responsive design makes a webpage adapt to different screen sizes, including mobile, tablet, and desktop.

13. What is a media query?

Answer: A media query applies CSS rules when conditions such as screen width are met.

14. How do you set a background color?

Answer: Use the background-color property, for example: body { background-color: lightgray; }.

15. How do you change text color and size?

Answer: Use color and font-size, for example: p { color: blue; font-size: 18px; }.

16. What is a navigation bar?

Answer: A navigation bar contains links that help users move between pages or sections of a website.

17. What is the difference between class and ID selectors?

Answer: A class uses a dot (.) and can style many elements. An ID uses a hash (#) and should identify one unique element on a page.

18. What is the difference between HTML and CSS?

Answer: HTML defines the structure and content of a webpage. CSS controls its appearance and layout.

19. What does display: flex do?

Answer: It makes an element a flex container so its child elements can be arranged using Flexbox.

20. What does border-radius do?

Answer: It rounds the corners of an element's border.

Part 2: Examples

Inline CSS

```
<p style="color: red;">Hello World</p>
```

Internal CSS

```
<head>
  <style>
    p { color: blue; }
  </style>
</head>
```

External CSS — HTML

```
<link rel="stylesheet" href="style.css">
```

External CSS — style.css

```
p { color: green; }
```

Common selectors

```
p { color: red; }
#heading { color: blue; }
.box { background-color: yellow; }
* { margin: 0; }
h1, p { font-family: Arial; }
```

Flexbox

```
.container {
  display: flex;
  justify-content: center;
  align-items: center;
}
```

Responsive media query

```
@media (max-width: 600px) {
  body { background-color: lightblue; }
}
```

Navigation bar

```
<nav>
  <a href="#home">Home</a>
  <a href="#about">About</a>
  <a href="#contact">Contact</a>
</nav>

nav { background-color: black; padding: 15px; }
nav a { color: white; text-decoration: none; margin-right: 20px; }
```

Part 3: Day 7 Practical Tasks

No.	Task	Expected output
1	Style the personal profile page.	A styled personal profile page.
2	Improve the student registration form.	A clean, styled registration form.
3	Create a navigation bar.	Navigation links for page sections.
4	Use Flexbox to arrange cards or sections.	Cards or sections arranged neatly.
5	Make the page responsive for mobile and desktop.	Layout adapts to different screen sizes.

Part 4: Important CSS Properties

Property	Use
color	Changes text color.
background-color	Changes background color.
font-size	Sets text size.
margin	Sets space outside the border.
padding	Sets space between content and border.
border	Adds a border around an element.
display: flex	Creates a flex layout.
justify-content	Aligns items along the main axis.
align-items	Aligns items along the cross axis.
width / height	Sets element dimensions.
border-radius	Rounds corners.
